*A Non-Hausdorff Completion* Saul Lubkin,2015-05-28 This book introduces entirely new invariants never considered before, in homological algebra and commutative (and even non-commutative) algebra. The C-completion  $C(M)$ , and higher C-completions,  $C_n(M)$ , are defined for an arbitrary left module  $M$  over a topological ring  $A$ . Spectral sequences are defined that use these invariants. Given a left module over a topological ring  $A$ , under mild conditions the usual Hausdorff completion:  $M^\wedge$  can be recovered from the C-completion  $C(M)$ , by taking the quotient module by the closure of  $\{0\}$ . The new invariants and tools in this book are expected to be used in the study of p-adic cohomology in algebraic geometry; and also in the study of p-adic Banach spaces — by replacing the cumbersome complete tensor product of p-adic Banach spaces, with the more sophisticated C-complete tensor product, discussed in this book. It is also not unlikely that the further study of these new invariants may well develop into a new branch of abstract mathematics - connected with commutative algebra, homological algebra, and algebraic topology.
